1 Unpair the scanner

- 1. Ensure the scanner is powered on.
- 2. Hold the *power* and *scan* buttons simultaneously.
- 3. You will hear three falling tones when the scanner unpairs.

2 Unpair the iOS device

- 1. Open the *Settings* app, and access the *Bluetooth* tab.
- 2. Tap the (i) icon beside the Socket CHS entry in the MY DEVICES section.
- 3. Tap Forget This Device.

3 Factory reset the scanner

- 1. Ensure the scanner is unpaired and powered on.
- 2. Scan the following code to reset all configuration on the scanner:

3. You will hear a musical chime, and the scanner will power off.

4 Configure the scanner for iOS mode

- 1. Ensure the scanner is unpaired and powered on.
- 2. Scan the following code to activate iOS Mode:

3. You will hear three rising tones.

5 Pair the scanner to an iOS device

- 1. Ensure the scanner is unpaired and powered on.
- 2. Open the Settings app on the iOS device, and access the Bluetooth tab.
- 3. Tap the **Socket CHS** entry in the *OTHER DEVICES* section.
- 4. Wait for the scanner to connect. You may have to unpair both devices and try again if the scanner does not connect.

6 iOS scanning help

- 1. Remember that all scanners must be unpaired, both on the scanner itself, and the device.
- 2. iOS devices require all scanners to be in iOS mode before pairing with the device.
- 3. Support for HID scanners was added in ZiiZii version 2.5.2 (released in September 2015).
